Department of Civil Engineering

Rate analysis is the calculation of all costs of materials used for the construction of the concrete structure in the field of civil engineering. Rate analysis is done before construction of the structure like a building, bridge, culvert, or road to get the approximate cost of full construction. If we want to do the rate analysis for concrete

The strength and durability of red bricks are so good, but those bricks are manufactured from natural resources (Soil), and it is very harmful to the environment. At present, the M sand is the alternative construction material for river sand to reduce the usage of natural resources. In the same way, now many replacement coarse aggregate materials
have come instead of present ...
